Product Safety & Liability Reporter- 1999

Справочник инженера предприятия технологического транспорта и спецтехники-А. Соловьев 2017-09-05 Приведены основные технические характеристики и конструктивные особенности по широкому спектру видов спецтехники, выпускаемых как в странах СНГ, так и за рубежом. Удобство справочника заключается в четкой классификации техники по разделам и расположении заводов-изготовителей в каждой главе строго в алфавитном порядке. В приложении приведены нормы расхода топлива на автомобильном транспорте, перечень государственных стандартов по тематике издания и краткая техническая информация по автомобильным шасси. Справочник предназначен для руководителей, инженеров транспортных и технологических отделов предприятий, занимающихся проектированием, разработкой и эксплуатацией спецтехники, работников организаций, производящих и реализующих спецтехнику, инспекторов Ростехнадзора, а также преподавателей и студентов соответствующих специальностей технических вузов.

Poverty-Bent Greve 2019-10-11 Poverty has dire consequences on the ability to fulfil one's aspirations for life. Poverty has strong implications for social cohesion and societies' abilities to function in harmonious ways. This book presents the readers with the core concepts, latest development and knowledge about policies that work to eliminate absolute poverty. This volume shows what the consequences are for the quality of life of those living in poverty. It describes life for people in poverty in general, but also deals more specifically with children, in-work poverty and the elderly, thus providing a life, generational and global perspective on poverty, including the impact on people's happiness levels. The book also discusses policies aimed at poverty reduction, such as changes to the labour market - including the risk of working poor - and shows that there is a variety of possible instruments available to reduce poverty. These range from direct provision of social security to ensuring education and a better functioning labour market. Written in an engaging and accessible style, the book provides a succinct insight into the concept of poverty, how to measure it, the situation of poverty around the globe as well as different types of possible interventions to cope with poverty. Supporting theory with examples and case studies from a variety of contexts, suggestions for further reading, and a detailed glossary, this text is an essential read for anyone approaching the study of poverty for the first time.

Hot Line Farm Equipment Guide Quick Reference Guide- 2008

Emily Post's Etiquette, 19th Edition-Lizzie Post 2017-04-18 The Emily Post Institute, the most trusted brand in etiquette, tackles the latest issues regarding how we interact along with classic etiquette and manners advice in this updated and gorgeously packaged edition. Today's world is in a state of constant change. But one thing remains year after year: the necessity for good etiquette. This 19th edition of Emily Post's Etiquette offers insight and wisdom on a variety of new topics and fresh advice on classic conundrums, including: Social media Living with neighbors Networking and job seeking Office issues Sports and recreation Entertaining at home and celebrations Weddings Invitations Loss, grieving, and condolences Table manners While they offer useful information on the practical—from table settings and introductions to thank-you notes and condolences—the Posts make it clear why good etiquette matters. Etiquette is a sensitive awareness of the feelings of others, they remind us. Ultimately, being considerate, respectful, and honest is what's really important in building positive relationships. "Please" and "thank you" do go a long way, and whether it's a handshake, a hug, or a friend request, it's the underlying sincerity and good intentions behind any action that matter most.

Motorized Obsessions-Paul R. Josephson 2007-08-22 From dirt bikes and jet skis to weed wackers and snowblowers, machines powered by small gas engines have become a permanent—and loud—fixture in American culture. But fifty years of high-speed fun and pristine lawns have not come without cost. In the first comprehensive history of the small-bore engine and the technology it powers, Paul R. Josephson explores the political, environmental, and public health issues surrounding one of America's most dangerous pastimes. Each chapter tells the story of an ecosystem within the United States and the devices that wreak havoc on it—personal watercraft (PWCs) on inland lakes and rivers; all-terrain vehicles (ATVs) in deserts and forests; lawn mowers and leaf blowers in suburbia. In addition to environmental impacts, Josephson discusses the development and promotion of these technologies, the legal and regulatory efforts made to improve their safety and environmental soundness, and the role of owners' clubs in encouraging responsible operation. Synthesizing information from medical journals, recent environmental research, nongovernmental organizations, and manufacturers, Josephson's compelling history leads to one irrefutable conclusion: these machines cannot be operated without loss of life and loss of habitat.

Field Book for Describing and Sampling Soils- 1998

Ungulate Taxonomy-Colin Groves 2011-11-15 A well-reasoned synthesis, Ungulate Taxonomy will be a defining volume for years to come.

Atmospheric Rivers-F. Martin Ralph 2020-07-10 This book is the standard reference based on roughly 20 years of research on atmospheric rivers, emphasizing progress made on key research and applications questions and remaining knowledge gaps. The book presents the history of atmospheric-rivers research, the current state of scientific knowledge, tools, and policy-relevant (science-informed) problems that lend themselves to real-world application of the research—and how the topic fits into larger national and global contexts. This book is written by a global team of authors who have conducted and published the majority of critical research on atmospheric rivers over the past years. The book is intended to benefit practitioners in the fields of meteorology, hydrology and related disciplines, including students as well as senior researchers.

Edible Insects-Arnold van Huis 2013 Edible insects have always been a part of human diets, but in some societies there remains a degree of disdain and disgust for their consumption. Insects offer a significant opportunity to merge traditional knowledge and modern science to improve human food security worldwide. This publication describes the contribution of insects to food security and examines future prospects for raising insects at a commercial scale to improve food and feed production, diversify diets, and support livelihoods in both developing and developed countries. Edible insects are a promising alternative to the conventional production of meat, either for direct human consumption or for indirect use as feedstock. This publication will boost awareness of the many valuable roles that insects play in sustaining nature and human life, and it will stimulate debate on the expansion of the use of insects as food and feed.

Seek that which is Above-Joseph Ratzinger 2007-01-01 Presents a series of meditations on Christian life, focusing on such events of the church year as Advent, Lent, and Corpus Christi, and discussing such topics as the nature of peace and the relationship between spirit and matter.

Rivers for life-Benazir Ahmed 2014-11-18 This publication includes papers that were part of thirty-five oral and nine poster presentations on various themes presented by eminent researchers/practitioners at the international symposium on “River Biodiversity: Ganges-Brahmaputra-Meghna River System” facilitated and supported by IUCN.

Building for Life-Stephen R. Kellert 2012-09-26 Sustainable design has made great strides in recent years; unfortunately, it still falls short of fully integrating nature into our built environment. Through a groundbreaking new paradigm of "restorative environmental design," award-winning author Stephen R. Kellert proposes a new architectural model of sustainability. In *Building For Life*, Kellert examines the fundamental interconnectedness of people and nature, and how the loss of this connection results in a diminished quality of life. This thoughtful new work illustrates how architects and designers can use simple methods to address our innate needs for contact with nature. Through the use of natural lighting, ventilation, and materials, as well as more unexpected methodologies—the use of metaphor, perspective, enticement, and symbol—architects can greatly enhance our daily lives. These design techniques foster intellectual development, relaxation, and physical and emotional well-being. In the works of architects like Frank Lloyd Wright, Eero Saarinen, Cesar Pelli, Norman Foster, and Michael Hopkins, Kellert sees the success of these strategies and presents models for moving forward. Ultimately, Kellert views our fractured relationship with nature as a design problem rather than an unavoidable aspect of modern life, and he proposes many practical and creative solutions for cultivating a more rewarding experience of nature in our built environment.

Diversity and Dominion-Kyle Schuyler Van Houtan 2010 Description: This book records a set of dialogues between scientists, theologians, and philosophers on what can be done to prevent a global slide into ecological collapse. It is a uniquely multidisciplinary book that exemplifies the kinds of cultural and scholarly dialogue urgently needed to address the threat to the earth represented by our super-industrial civilization. The authors debate the conventional account of nature conservation as protection from human activity. In contrast to standard accounts, they argue what is needed is a new relationship between human beings and the earth that recovers a primal respect for all things. This approach seeks to recover forgotten resources in ancient cultures and in the foundational narratives of Western civilization contained in the Bible and in the culture of classical Greece. Endorsements: "A refreshing critique of both evangelical and liberal North American environmental discourse, a bold exercise in multi-disciplinary conversation, and a welcome retrieval of the virtues of creaturely humility and gratitude." -Ernst M. Conradie University of the Western Cape, South Africa "This wonderfully rich book is a model of deep conversation on crucial challenges we face. The most important issues are intrinsically interdisciplinary, yet we often settle for talking 'at' or 'to' one another. This is especially true among the 'environmental' and 'religious' communities. The conversations in this book show that deep interdisciplinary engagements offer opportunities to re-frame the questions and re-describe the challenges in more promising and life-giving ways, transforming participants and the issues alike. A terrific achievement." -L. Gregory Jones Duke University "Underlying the environmental movement are a set of mostly undiscussed ethical and theological assumptions about the nature of the world and our relationship to it. In this pioneering volume, scholars from various perspectives engage in a deep exploration of the relationship of ecology, theology, and ethics. The results are often illuminating, sometimes surprising, and uniformly worth engaging." --Paul Root Wolpe Emory University "Van Houtan and Northcott engage scientists, ethicists, theologians, and other thinking persons in dialogue, working to re-ligate the torn academic and social fabric, and bringing all to see and respond to the biosphere--the awesome creation that calls for our guardianship and respectful service. They have us join this dialogue, motivating us--guardians all--toward nurturing the kind of wisdom and humility that brings good news to every creature." --Calvin DeWitt University of Wisconsin About the Contributor(s): Kyle S. Van Houtan is a Post-Doctoral Fellow in the Program in Science and Society and a Research Fellow in the Center for Ethics at Emory University. He has served as a biologist with the Smithsonian Institution and the U.S. Geological Service. Michael S. Northcott is Professor of Ethics in the School of Divinity in the University of Edinburgh, Scotland. He is the author of *The Environment and Christian Ethics* (1996)

Arctic Biodiversity Assessment-Conservation of Arctic Flora and Fauna 2013

The Caesars Palace Coup-Sujeet Indap 2021-03-16 It was the most brutal corporate restructuring in Wall Street history. The 2015 bankruptcy brawl for the storied casino giant, Caesars Entertainment, pitted brilliant and ruthless private equity legends against the world's most relentless hedge fund wizards. In the tradition of *Barbarians at the Gate* and *The Big Short* comes the riveting, multi-dimensional poker game between private equity firms and distressed debt hedge funds that played out from the Vegas Strip to Manhattan boardrooms to Chicago courthouses and even, for a moment, the halls of the United States Congress. On one side: Apollo Global Management and TPG Capital. On the other: the likes of Elliott Management, Oaktree Capital, and Appaloosa Management. The Caesars bankruptcy put a twist on the old-fashioned casino heist. Through a \$27 billion leveraged buyout and a dizzying string of financial engineering transactions, Apollo and TPG—in the midst of the post-Great Recession slump—had seemingly snatched every prime asset of the company from creditors, with the notable exception of Caesars Palace. But Caesars' hedge fund lenders and bondholders had scooped up the company's paper for nickels and dimes. And with their own armies of lawyers and bankers, they were ready to do everything necessary to take back what they believed was theirs—if they could just stop their own infighting. These modern financiers now dominate the scene in Corporate America as their fight-to-the-death mentality continues to shock workers, politicians, and broader society—and even each other. In *The Caesars Palace Coup*, financial journalists Max Frumes and Sujeet Indap illuminate the brutal tactics of distressed debt mavens—vultures, as they are condemned—in the sale and purchase of even the biggest companies in the world with billions of dollars hanging in the balance.

Problems from Philosophy-James Rachels 2008-03-21 "This [text] is an introduction to some of the main problems of philosophy—the existence of God, the nature of the mind, human freedom, the limits of knowledge, and the truth about ethics. The chapters may be read independently of one another, but when read in order, they tell a more or less continuous story. We begin with some reflections on the life of Socrates and then go on to the existence of God, which is the most basic philosophical question, because our answer to it affects everything else. This leads naturally to a discussion of death and the soul, and then to more modern ideas about the nature of persons. The later chapters are about whether we can have objective knowledge in either science or ethics." -from

the Preface Problems from Philosophy represents the final work of author and philosopher James Rachels. In it, he brings the same liveliness and clarity to the introduction of philosophy that he brings to his best-selling ethics text, *The Elements of Moral Philosophy*. This second edition has been revised by Rachels' son Stuart, who carefully has carefully refined his father's work to further strengthen its clarity and accessibility.

Historical Collections of Ohio...-Henry Howe 1902

The Geopolitics of the Global Energy Transition-Manfred Hafner 2020-01-01 The world is currently undergoing an historic energy transition, driven by increasingly stringent decarbonisation policies and rapid advances in low-carbon technologies. The large-scale shift to low-carbon energy is disrupting the global energy system, impacting whole economies, and changing the political dynamics within and between countries. This open access book, written by leading energy scholars, examines the economic and geopolitical implications of the global energy transition, from both regional and thematic perspectives. The first part of the book addresses the geopolitical implications in the world's main energy-producing and energy-consuming regions, while the second presents in-depth case studies on selected issues, ranging from the geopolitics of renewable energy, to the mineral foundations of the global energy transformation, to governance issues in connection with the changing global energy order. Given its scope, the book will appeal to researchers in energy, climate change and international relations, as well as to professionals working in the energy industry.

Modern Electric, Hybrid Electric, and Fuel Cell Vehicles, Third Edition-Mehrdad Ehsani 2018-02-02 The book deals with the fundamentals, theoretical bases, and design methodologies of conventional internal combustion engine (ICE) vehicles, electric vehicles (EVs), hybrid electric vehicles (HEVs), and fuel cell vehicles (FCVs). The design methodology is described in mathematical terms, step-by-step, and the topics are approached from the overall drive train system, not just individual components. Furthermore, in explaining the design methodology of each drive train, design examples are presented with simulation results.

Letters from the Battlefields of Paraguay-Richard Francis Burton 2021-04-11 "Letters from the Battlefields of Paraguay" by Richard Francis Burton. Published by Good Press. Good Press publishes a wide range of titles that encompasses every genre. From well-known classics & literary fiction and non-fiction to forgotten—or yet undiscovered gems—of world literature, we issue the books that need to be read. Each Good Press edition has been meticulously edited and formatted to boost readability for all e-readers and devices. Our goal is to produce eBooks that are user-friendly and accessible to everyone in a high-quality digital format.

Creative Sciencing-H. Gerald Krockover 2001-01-01 More than 130 activity ideas - growing crystals, launching water rockets, testing a light dimmer, mapping elevations, testing soil - prompt students to make eye-opening discoveries in biology, chemistry, earth science, environmental science, and physics. Each activity ends by citing other related activities in the book. A special "more for less" section provides tips for getting and making scientific materials at bargain prices, and all activities are indexed by skills and subject areas. Grades K-8. Index. Conversion tables. Illustrated. Good Year Books. 306 pages. Third Edition.

Ecological Management of Pine Forests- 2019-01-24 Natural pine forests characterize many landscapes preserved over time, either as a result of a specific forest management practice or a disturbance. In the event of a lack of management over a long period of time, these formations could evolve with increasingly chaotic structures towards other formations. This process can lead to landscape change, the spread of insects and pathogens, and the risk of fires and watercourse obstruction. Pine forest plantations should be considered as transient tree populations, destined to evolve into more complex and stable formations. However, sometimes they should be preserved for their cultural value. Careful management of these forests also takes into account the close relationship between forest and human settlements. As a first step, ecological management assumes the definition of these two macro types. These approaches include the application of integrated methods for determining the reference conditions of the main functional and structural ecosystem components of forests. The reference conditions are the historical (or natural) variability range of ecological structures and processes, reflecting the recent evolution and dynamic interaction of biotic and abiotic conditions and patterns of disturbance. These conditions form the basis for comparison with contemporary ecosystem processes and structures and are a frame of reference for designing ecological restoration treatments and conservation plans. The productive aspects must not be overlooked; rather, they have to be considered, planned, and managed with a perspective of sustainability and ecosystem functionality. This should be considered for a common approach to forest management, for a forest rehabilitation, and for forest restoration activities.

Energy and Environment-Richard Loulou 2005-12-05 This new work on energy and environmental modeling describes a broad variety of modeling methodologies, embodied in models of varying scopes and philosophies. Examples range from top-down integrated assessment models to bottom-up partial equilibrium models, to hybrid models.

See What I Can Make!- 2009-07 Girls use various household items to create a castle, post office, library, and hair salon.

The Devil's Punchbowl-Greg Iles 2011-12-06 A deep river pit in Natchez, Mississippi, reputed to be the hiding spot for Jean Lafitte's hidden treasure and a dumping ground for numerous murder victims, becomes the site of a dangerous showdown for Penn Cage, in a tale beset by racial tension, betrayals and illicit sex. By the author of Third Degree. Reprint.

Wildlife in a Changing Climate-Edgar Kaeslin 2012 Major climate-induced changes -- Consequences of climate change -- Measures for adaptation to climate change -- Conclusions -- References.

The Killers of Cimarron-Frank Leslie 2010-06-01 After outlaws steal a cache of gold and take a young woman hostage, Colter Farrow is back on the vengeance trail, determined to bring the woman back alive-and send the killers of Cimarron straight to hell.

Forest Hydrology-Devendra Amatya 2016-09-14 Forests cover approximately 26% of the world's land surface area and represent a distinct biotic community. They interact with water and soil in a variety of ways, providing canopy surfaces which trap precipitation and allow evaporation back into the atmosphere, thus regulating how much water reaches the forest floor as through fall, as well as pull water from the soil for transpiration. The discipline "forest hydrology" has been developed throughout the 20th century. During that time human intervention in natural landscapes has increased, and land use and management practices have intensified. The book will be useful for graduate students, professionals, land managers, practitioners, and researchers with a good understanding of the basic principles of hydrology and hydrologic processes.
