Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles-National Research Council 2015-09-28 The light-duty vehicle fleet is expected to undergo substantial technological changes over the next several decades. New powertrain designs, alternative fuels, advanced materials and significant changes to the vehicle body are being driven by increasingly stringent fuel economy and greenhouse gas emission standards. By the end of the next decade, cars and light-duty trucks will be more fuel efficient, weigh less, emit less air pollutants, have more safety features, and will be more expensive to purchase relative to current vehicles. Though the gasoline-powered spark ignition engine will continue to be the dominant powertrain configuration even through 2030, such vehicles will be equipped with advanced technologies, materials, electronics and controls, and aerodynamics. And by 2030, the deployment of alternative methods to propel and fuel vehicles and alternative modes of transportation, including autonomous vehicles, will be well underway. What are these new technologies - how will they work, and will some technologies be more effective than others? Written to inform The United States Department of Transportation's National Highway Traffic Safety Administration (NHTSA) and Environmental Protection Agency (EPA) Corporate Average Fuel Economy (CAFE) and greenhouse gas (GHG) emission standards, this new report from the National Research Council is a technical evaluation of costs, benefits, and implementation issues of fuel reduction technologies for next-generation light-duty vehicles. Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles estimates the cost, potential efficiency improvements, and barriers to commercial deployment of technologies that might be employed from 2020 to 2030. This report describes these promising

technologies and makes recommendations for their inclusion on the list of technologies applicable for the 2017-2025 CAFE standards.

The Safety Promise and Challenge of Automotive Electronics- 2012-01-01 TRB has released the final version of TRB Special Report 308: The Safety Promise and Challenge of Automotive Electronics: Insights from Unintended Acceleration, which examines how the National Highway Traffic Safety Administration (NHTSA) regulatory, research, and defect investigation programs can be strengthened to meet the safety assurance and oversight challenges arising from the expanding functionality and use of automotive electronics. The report gives particular attention to the NHTSA response to consumer complaints of vehicles accelerating unintentionally and to concerns that faulty electronic systems may have been to blame. The committee that produced the report found that the increasingly capable and complex electronics systems being added to automobiles present many opportunities for making driving safer but also present new demands for ensuring their safe performance. These safety assurance demands pertain both to the automotive industry development and deployment of electronics systems and to the safety oversight role of NHTSA. With regard to the latter, the committee recommends that NHTSA give explicit consideration to the oversight challenges arising from automotive electronics and that the agency develop and articulate a long term strategy for meeting these challenges.

Pre-Incident Indicators of Terrorist Incidents-Brent L. Smith 2011-01 This is a print on demand edition of a hard to find publication. Explores whether sufficient data exists to examine the temporal and spatial relationships that existed in terrorist group planning, and if so, could patterns of preparatory conduct be identified? About one-half of the terrorists resided, planned, and prepared for terrorism relatively close to their eventual target. The terrorist groups existed for 1,205 days from the first planning meeting to the date of the actual/planned terrorist incident. The planning process for specific acts began 2-3 months prior to the terrorist incident. This study examined selected terrorist groups/incidents in the U.S. from 1980-2002. It provides for the potential to identify patterns of conduct that might lead to intervention prior to the commission of the actual terrorist incidents. Illustrations.

The Cadillac Story-Thomas E. Bonsall 2004 The Cadillac story is more than the story of a car company. It is, in many ways, the story of the American automobile industry itself—which, as much as any industry, drove America's growth in the twentieth century and defined who we are as a people. For generations of Americans, Cadillac epitomized expansive prosperity. This illustrated history of

Cadillac presents all the triumphs and failures of the marque's last sixty years; from the good times, through the disastrous 1980s, and up to the current reconstitution of the brand.

Cadillac V-16s Lost and Found-Christopher W. Cummings 2014-02-01 For eleven years prior to World War II, Cadillac defied the norms of practicality and produced an extravagant supercar, a 16-cylinder luxury automobile that could be tailored to the customer's every want. Big, thirsty and lavish, it cemented Cadillac's place in the top tier of motoring magnificence. Each of the cars has its own colorful and fascinating story to tell. Driven by a life-long love of the V-16 and an interest in the history of his own car, the author has assembled more than 65 of these tales, gleaned from interviews, books, periodicals and documents, into a liberally illustrated book. Each story is shaped by the people a particular car touched, and the events they lived through together. All are an important part of our automotive and cultural history.

Diamond T Trucks 1911-1966 Photo Archive-Robert Gabrick 2007-09-27 The Diamond T Motor Car Company manufactured automobiles until 1911 when the first truck led to exclusive truck production and soon gained legendary status as style leaders. While "The Handsomest Truck in America" became a long-standing slogan, Diamond T also emphasized its engineering leadership. Builders of more than 1500 Class B "Liberty" trucks in World War I, Diamond T produced nearly 50,000 thousand prime movers, half-tracks, army wreckers, tank tractors, and tank movers in World War II. The late 1940s were years of peak production, but as the 1950s progressed, Diamond T found independent status problematic. The White Motor Company purchased Diamond T in 1958; moving production from Chicago to Reo's manufacturing facilities in Lansing, Michigan, in 1960, creating the Lansing Division to produce Diamond T and Reo trucks. Both Diamond T and Reo ceased to be separate trucks starting in 1967 when White's new Diamond Reo Division began producing Diamond Reo trucks.

Devil in the Details-Jennifer Traig 2007-09-03 Jennifer Traig's memoir Devil in the Details paints a portrait of a well-meaning Jewish girl and her good-natured parents, and takes a very funny, very sharp look back at growing up with obsessive-compulsive disorder. Recalling the agony of growing up an obsessive-compulsive religious fanatic, Traig fearlessly confesses the most peculiar behavior like tirelessly scrubbing her hands for a full half hour before dinner, feeding her stuffed animals before herself, and washing everything she owned because she thought it was contaminated by pork fumes. Jennifer's childhood mania was the result of her then undiagnosed OCD joining forces with her Hebrew studies-what psychiatrists call scrupulosity While preparing for her bat mitzvah, she was introduced to an entire set of arcane laws and quickly made it her mission to follow them perfectly. Her parents nipped her religious obsession in the bud early on, but as her teen years went by, her natural tendency toward the extreme led her down different paths of adolescent agony and mortification. Years later, Jennifer remembers these scenes with candor and humor. In the bestselling tradition of Running with Scissors and A Girl Named Zippy, Jennifer Traig tells an unforgettable story of youthful obsession.
