**The Antibiotic Paradox**-Stuart B. Levy 2013-11-11 The discovery of antibiotics heralded medicine's triumph over previously fatal diseases that once destroyed entire civilizations - thus earning their reputation as miracle drugs. But today, the terrifying reality of antibiotic-resistant bacteria resulting from our widespread misuse of antibiotics forewarns us that the miracle may be coming to an end. The seemingly innocent consumer who demands antibiotics to treat nonbacterial diseases such as the common cold or plays doctor by saving old prescriptions for later use is paving the way for a future of antibiotic failure. "What harm can it do?" is a popular refrain of people worldwide as they pop another antibiotic pill. Dr. Stuart Levy - the leading international expert on hazards of antibiotic misuse - reveals how this cavalier and naive attitude about the power of antibiotics can have deadly consequences. He explains that we are presently witnessing a massive evolutionary change in bacteria. This build-up of new antibiotic-resistant bacteria in individuals and the environment worldwide is an insidious and silent process. Thus, unwittingly consumers encounter resistant bacteria in their meat, poultry, fish, and vegetables. Unregulated dispensing of antibiotics in poorer countries breeds countless more resistant strains. Since bacteria recognize no geographical boundaries, resistant forms can travel the globe. If this trend continues to grow unchecked, we may someday find that all of our antibiotics are obsolete. Today doctors can no longer expect that their first choice of antibiotic for women's urinary tract infections or children's ear infections will work. Similarly, cancer therapy is rendered useless if patients are unable to fight infections that are sometimes resistant to eight to ten different drugs. In developing countries, people are now dying of previously treatable diseases that are no longer responsive to traditional antibiotics. These problems are just a harbinger of what will come if we do not act now. Dr. Levy, recognized by *The New Yorker* for his superb contributions to this field, is sending out an urgent message that the world cannot afford to ignore any longer. The goal of this unprecedented investigation into the dangers of antibiotic misuse is to protect the world community from resistant infections and ensure the success of antibiotics for generations to come

**Advancing the Science of Climate Change**-National Research Council 2011-01-10 Climate change is occurring, is caused largely by human activities, and poses significant risks for--and in many cases is already affecting--a broad range of human and natural systems. The compelling case for these conclusions is provided in Advancing the Science of Climate Change, part of a congressionally requested suite of studies known as America's Climate Choices. While noting that there is always more to learn and that the scientific process is never closed, the book shows that hypotheses about climate change are supported by multiple lines of evidence and have stood firm in the face of serious debate and careful evaluation of alternative explanations. As decision makers respond to these risks, the nation's scientific enterprise can contribute through research that improves understanding of the causes and consequences of climate change and also is useful to decision makers at the local, regional, national, and international levels. The book identifies decisions being made in 12 sectors, ranging from agriculture to transportation, to identify decisions being made in response to climate change. Advancing the Science of Climate Change calls for a single federal entity or program to coordinate a national, multidisciplinary research effort aimed at improving both understanding and responses to climate change. Seven cross-cutting research themes are identified to support this scientific enterprise. In addition, leaders of federal climate research should redouble efforts to deploy a comprehensive climate observing system, improve climate models and other analytical tools, invest in human capital, and improve linkages between research and decisions by forming partnerships with action-oriented programs.
